

**The Maine Comprehensive School Counseling
Program Model 2.0**

(ME CSCP 2.0)

January 2021

Dear Maine School Counselors,

With the hard work and determination of several PreK-12 school counselors from across Maine and the leadership of Erin Flynn (Oxford Hills Comprehensive High School) and Anastasia (Asia) Alexis (Deering High School), school counselors and school administrative units (SAUs) now have a model Comprehensive School Counseling Program (CSCP) in which to guide them in developing a CSCP that is consistent with the duties of the school counselor. Maine's model CSCP is aligned with the American School Counselor Association's National Model which ensures equitable access to a rigorous education for all students, identifies the knowledge and skills all students will acquire as a result of its implementation, is delivered to all students in a systematic fashion, is based on data-driven decision making, and is delivered by a state-credentialed school counselor.

This work is essential to an SAU's Comprehensive Education Plan, as determined under Maine DOE's Public School Approval requirement, which indicates that in an SAU's certification and approval process, submitted annually by the superintendent, it must contain a CSCP.

Comprehensive School Counseling Programs, driven by student data and based on standards in academic, career and social/emotional development, promote and enhance the learning process for all students. The model CSCP was written to acknowledge Maine's Learning Results revised as of March 2020.

Future CSCP model work will include an up-to-date cross-walk with the [ASCA Mindsets & Behaviors for Student Success: K-12 College- and Career Readiness for Every Student](#) to ensure the highest levels of effectiveness in its implementation.

School counselors are encouraged to collaborate with district and school leadership to review this model CSCP and add to it specific academic programming and greater school community resources, requirements, and information.

Thank you for the great work that you do every day for PreK-12 students in Maine. With your support, every student will have the skills and tools necessary to be successful in their learning and within the school community.

Sincerely,

Bear Shea
Mental Health/School Counselor Specialist
Maine Department of Education

ACKNOWLEDGEMENTS

The Maine Comprehensive School Counseling Program Model 2.0 is the product of numerous contributions of many dedicated professionals who are committed to transforming school counseling programs in the State of Maine.

Project Coordinators

Anastasia (Asia) Alexis, Ed.M., School Counselor, Deering High School
Erin Flynn, M.S. School Counselor, Oxford Hills Comprehensive High School

Collaborators

School Counselors in Maine

Elena Perello, EdD., (retired) School Counselor and Counselor Educator
Bonnie Robbins, C.A.S., School Counselor, Whittier Middle School & ASCA Board of Directors
Kara Sprague, School Counselor, M.S, NCC, Messalonskee High School
Kris Croteau, M.S., LCPC, Student Service Coordinator, Mid-Maine Technical Center
Nicole Hatch M.Ed., School Counselor, Thomaston Grammar School
Deborah Drew, EdD., L.C.P.C., Counselor Educator, Husson University
Kelly O'Brien, NBCT, C.A.S., School Counselor, Weatherbee School, RAMP Certified program
Marisa Emerson, M.S., NCC, School Counselor, Portland High School
Sarah Adkins, MS Ed. Former Student Assistance Coordinator, Maine DOE

Special Appreciation

Thank you to the authors of the first edition of the Maine Comprehensive School Counseling Program Model K-12, first published in 2005. They blazed a trail for us, leading the way as our state embarked on a new journey toward comprehensive school counseling programs for the State of Maine.

Kate Clough, (retired) School Counselor
Laurie Hall, School Counselor
David Hanc, School Counselor
Tanya Reed, School Counselor
Laurie Johnson, School Counselor
Dr. Elena Perello, (retired) School Counselor
Tim Walker, School Counselor
Shelley Reed, (retired) School Counselor
Martin Lynch, School Counselor
Karin Congleton, (retired) School Counselor

Thank you to Dr. Eric Sparks, Deputy Executive Director, American School Counselor Association for editing this model and offering his insight and expertise.

Introduction

The Maine School Counseling Program Model 2.0 (ME CSCP 2.0) is a state-based systematic framework for helping school counselors to design and implement comprehensive school counseling programs at a district or school level. School counselors must have a minimum of a master's degree from a school counseling program or concentration and the Maine DOE certification endorsement 075 School Counselor. School counselors deliver comprehensive school counseling programs at all levels of PreK-12 education with a focus on improving individual student success and school climate. The ME CSCP 2.0 is designed to help certified school counselors implement school counseling activities which are comprehensive in scope, preventative in design, and developmental in nature. The American School Counselor Association (ASCA) National Model: A Framework for School Counseling Programs, 4th ed. (2019) was used as a guide in developing the ME CSCP 2.0 however this model contains additional suggestions for practice that are consistent with feedback from practitioners in Maine. School counselors who are attempting to receive RAMP designation from ASCA should also closely follow ASCA's recommendations, timelines, and deadlines for the RAMP application. The Maine Department of Education promotes the description of the role of the School Counselor as stated by ASCA. See ASCA's Role of the School Counselor: [The Role of the School Counselor](#)

Comprehensive in Scope

A comprehensive school counseling program is extensive and far-reaching in its objectives. The program should take into account the overall needs of stakeholders and should be accountable to students first and foremost. A high quality school counseling program rests on the three pillars, or domains, of school counseling: academic success, college/career readiness and social/emotional development.

Preventative in Design

In a comprehensive school counseling program, 80% of the counselors time should be spent on providing direct services to and indirect services on behalf of students. To meet this goal, a comprehensive school counseling program focuses on preemptive, school-wide activities and services that give students the skills they might need to problem solve, use resources effectively, and set goals so that they may feel successful in school.

Developmental in Nature

A quality comprehensive school counseling program aims to ensure that students are able to meet standards for learning. Identified standards should be agreed upon by the school counseling team. While school counseling standards provide norms and benchmarks to show that students are proficient in the three domains of school counseling, school counselors still meet each student where they are in their specific stage of development. An overarching goal of any school counseling program is to help students grow into active and responsible members of society. Examples of standards to use include: *ASCA's Mindsets & Behaviors for Student Success*:

K-12 College- and Career-Readiness Standards for Every Student and the *Maine Learning Results: Career and Education Development*. ASCA has recently surveyed members for feedback and is assessing the 2014 Mindsets & Behaviors for revision.

The ME CSCP 2.0, like the ASCA National Model, assists certified school counselors to implement school counseling activities that are beneficial to a variety of stakeholders. Using the ME CSCP 2.0, along with ASCA templates and publications, school counselors are guided in developing comprehensive programs that are:

- Equitable
- Developmentally appropriate
- Integrated into the whole district or school
- Accessible to all students
- Driven by data
- Measurable
- Collaborative
- Preventative
- Accountable to the larger school community, families, and individuals
- Results oriented
- Within the recommended scope of practice
- Modifiable to fit a specific program
- Based on student standards for learning
- Supportive of overarching district goals and school specific missions
- Professionally responsible

Benefits of a Comprehensive School Counseling Program

The fundamental benefit of working from a comprehensive school counseling program is that a school counselor can feel confident that they are providing services rooted in best practice. Furthermore, the comprehensive school counseling program provides services that impact individuals, families, and the larger school community. The following is a list of additional benefits afforded to a variety of stakeholders when a school/school district implements a comprehensive school counseling program:

Benefits for Students

- Provides access to school counseling services for all students
- Supports students in social/emotional well being, academic success, and college/career readiness
- Promotes a developmental approach in sequencing school counseling activities
- Increases the opportunity for counselor-student interaction
- Ensures equitable access to student services
- Works to close the achievement and opportunity gaps
- Provides activities rooted in data and school specific identified needs
- Establishes a system for a student's long-range planning

Benefits for Parent(s)/Guardian(s)

- Provides support for parents regarding their child's academic success, social/emotional development,

and college/career readiness

- Increases opportunities for parent-counselor interaction
- Provides an opportunity for parents to give input in school counseling program activities
- Provides an opportunity for partnership and supported advocacy in student planning

Benefits for Teachers

- Provides a framework for collaborative and supportive working relationships
- Promotes a team effort to address developmental skills and core competencies
- Provides a set calendar of developmentally appropriate activities that teachers can complement
- Increases teacher accessibility to the counselor as a classroom presenter and resource person
- Offers an avenue to monitor key pieces of student data which are able to aid in student improvement
- Provides specific preventative, restorative, and responsive activities to support a classroom's academic mission

Benefits for Administrators

- Creates a structured program with specific school counseling content
- Provides a means for measuring the effectiveness of school counseling programs through the use of data
- Provides a framework for collaboration and appropriate role delineation
- Enhances the positive image of the whole school
- Offers clarity on the role and scope of the school counselor and provides guidance for school counselor evaluation
- Aligns the work of the school counselor with the school's overall mission and student learning outcomes
- Offers an avenue to monitor key pieces of student data which are able to aid in student improvement.
- Provides a rationale based on data for supporting a school counseling program

Benefits for School Counselors

- Ensures the school counseling program's contribution to the school's mission
- Clearly defines school counselor's professional identity and role
- Supports access to every student
- Provides pre-designed measures and data collection methods
- Provides modifiable tools for program management, implementation, and evaluation
- Recognizes the school counselor as a leader, advocate, and change agent
- Assist with providing 80% of time on direct and indirect services

Benefits to Social Worker, Crisis Response Teams, and Other Student Support Services

- Defines the role and practice of the school counselor
- Provides a model for collaborative student services
- Provides a model for preventative services for all students

Benefits for Local Boards of Education

- Presents the rationale for including a district level, K-12 school counseling program
- Provides district patrons with current data regarding student competencies obtained through school counseling program efforts
- Demonstrates the efficacy of the school counseling program, which can support funding
- Clarifies role and function of a school counselor

Benefits for the Business & Labor Industry

- Provides increased opportunity for collaboration and active participation between counselors and business
- Allows for diverse pathways between schools and places of employment
- Prepares a potential workforce with skills needed in career and postsecondary education (i.e. decision-making skills, time management, organizational skills, and increased maturity)
- Increased understanding of workforce pathways
- Facilitates access to training opportunities and resources (i.e. financial aid)

Benefits to Counselor Educators

- “Builds collaboration between counselor education programs and schools
- Provides a framework for school counselor training programs
- Provides a model for site-based school counseling fieldwork or internships
- Increases data collection for collaborative research on school counseling programs
- Establishes a framework for professional development to benefit practicing school counselors
- Promotes alliances with other constituent training programs” (Bardhoshi, 2016)

Benefits for Post Secondary Education

- “Enhances [opportunities for] matriculation and transition of students to postsecondary institutions
- Prepares every student for advanced educational opportunities
- Motivates every student to seek a wide range of substantial postsecondary options
- Encourages and supports rigorous academic preparation
- Promotes equity and access to postsecondary education for every student” (Bardhoshi, 2016)

Suggested Steps in creating a Comprehensive School Counseling Program

Year 1: Fall

1. Read through the Maine Comprehensive School Counseling Program Model 2.0.
2. Visit the recourse section at Maine DOE website and download [ASCA 4th Edition Templates](#).
3. Meet with other school counselors in your school or district as well as administrators to discuss your intent, get support for, and discuss the delivery of your comprehensive school counseling program.
4. Write and adopt components of the program’s (beliefs, mission, vision, & program goals).
5. Complete a school-wide needs assessment.
6. Complete a school counselor competency assessment to identify areas where you’d like to focus on professional growth and learning for next year.

Year 1: Spring

7. Complete a program assessment and compare your current program with the ME CSCP 2.0.
8. In June, connect with the district’s ESEA coordinator to review your district’s Comprehensive Needs Assessment and if applicable, the school’s improvement plan.
9. Complete the school data profile to identify relevant data elements to look over.
10. Create tentative Action Plans.
11. Review relevant data elements to identify areas for possible school-wide interventions and program improvement.
12. Identify assessment and organizational tools to align with the areas of improvement that have been identified ([ASCA 4th Edition Templates](#)).
13. Develop a one-to-three-year plan for implementation. Include a clear timeline and a chart delineating

the division of responsibility.

14. Create the following year's annual calendar including dates for the different elements listed in the manage section.
15. Identify next year's mission statement, vision statement, beliefs, and goals.
16. Invite participants to be on the advisory council.

Year 2: Fall

17. Complete an annual administrative conference
18. Identify other educators to collaborate with on the implementation of the comprehensive school counseling program.
19. Complete a Use of Time Assessment
20. Finalize action plans aligned with outcome goals and data.
21. Present the plan to administrators and other relevant stakeholders.
22. Implement the plan and collect data on program implementation using the tools in the manage section.
23. Conduct an Advisory Council Meeting

Year 2: Spring

24. Complete a second Use of Time Assessment
25. Review your annual calendar.
26. Conduct a second Advisory Council meeting
27. Analyze program data collected to determine results of the program using tools from the assess section.
28. Share your results with appropriate stakeholders and celebrate your successes.
29. Complete a second program assessment.

After implementation, consider applying for the Recognized ASCA Model Program (RAMP) designation to show how your program makes a difference in student achievement and success.

*See ASCA's suggested one year implementation guide here: [monthly checklist](#)

The Four Sections of a School Counseling Program

A comprehensive school counseling program has four sections. In section I: **Define**, school counseling standards for both students and professionals are mapped out as the defining components of the school counseling practice. These elements help to dictate what students should be learning (within the academic, social/emotional, and college/career domains) as a result of the comprehensive school counseling program.

In section II: **Manage**, the base of the comprehensive school counseling program is outlined. The manage section includes elements such as the program's beliefs, vision, and mission. The manage component also provides school counselors with tools and assessments to organize, implement, and evaluate their school counseling program.

Section III: **Deliver** provides school counselors with ways in which to implement the school counseling program. The deliver section outlines the direct activities school counselors provide for students as well as the

indirect services school counselors provide on behalf of students. The delivery section ensures a student's needs and learning goals are met.

Section IV: *Assess* provides guidance on how school counselors can analyze the data they've collected using the tools from the manage section. The assess section helps school counselors investigate how their programming is positively impacting students and outlines the ways in which to report that impact to key stakeholders.

Define

In this section, school counseling standards for both students and professionals are mapped out as the foundational components of school counseling practice. These elements help to dictate what students should be learning (within the academic, social/emotional, and college/career domains) as a result of the comprehensive school counseling program.

Student Learning Outcomes and Standards

The Maine model includes standards you can consider when developing your programming.

ASCA Mindset & Behaviors for Student Success

ASCA National Model Fourth Edition, (2019) outlines the 35 ASCA Mindsets & Behaviors standards students should meet to be successful in the three domains of school counseling: academic, college & career readiness, and personal/social. These competencies provide direction for developing an effective comprehensive school counseling program.

<https://www.schoolcounselor.org/getmedia/7428a787-a452-4abb-afec-d78ec77870cd/Mindsets-Behaviors.pdf>

The National Career Development Guidelines

These standards cover four domains: Personal Social Development, Educational Achievement, Lifelong Learning, and Career Management

<https://www.ncda.org/aws/NCDA/pt/sp/guidelines>

Maine Learning Results Career and Education Development Standards

These standards highlight the importance of goal setting, decision-making, and habits of mind within the context of learning other content areas.

<https://www.maine.gov/doe/learning/content/career/standards>

Collaborative for Academic, Social and Emotional Learning

CASEL's integrated framework promotes intrapersonal, interpersonal, and cognitive competence. There are five core competencies: Self Awareness, Self Management, Responsible Decision Making, Social Awareness and Relationship Skills.

<https://casel.org/core-competencies/>

State of Maine Health and Physical Education Standards

These standards focus on analyzing the reliability and validity of media, technology and health resources; communicating effectively using refusal and conflict-management skills; being better consumers of information; managing life challenges and stress; setting goals; and making healthy decisions.

<https://www.maine.gov/doe/learning/content/healthphysed/standards>

School Counselor Professional Development & Responsibility

School counselors must be advocates for themselves and the profession. School counselors *must* adhere to the ASCA Ethical Standards for School Counselors and should be knowledgeable about the ASCA Professional Standards and Competencies:

[https://www.schoolcounselor.org/About-School-Counseling/Ethical-Legal-Responsibilities/ASCA-Ethical-Standards-for-School-Counselors-\(1\)](https://www.schoolcounselor.org/About-School-Counseling/Ethical-Legal-Responsibilities/ASCA-Ethical-Standards-for-School-Counselors-(1))

Membership in a professional school counseling organization, such as ASCA and [MESCA](#) is recommended in order to stay up-to-date on current issues facing school counselors. Membership in other professional counseling organizations (MeCA, ACA, NCDCA, MeCDA) as well as adherence to codes of ethics beyond ASCA, can serve as *additional* resources for school counselors. Continuing education is required for maintaining certification and staying informed of professional practices. Both the University of Southern Maine and Husson University offer continuing graduate education courses in counselor education. School counselors who wish to earn a Certificate of Advanced Study at a Maine institution may do so at USM. State and national conferences as well as local workshops also provide professional learning opportunities to access important resources and information for school counselors. Having time to meet as a Pre-K-12 school counseling team is also important as it allows for discussion and learning about comprehensive program planning, grade level transitions, case conferences, data review and peer supervision. When a school district holds an in-service day, it would be of value to school counselors to collaborate with administration to plan professional learning that is specific to the needs of school counselors. It can also be noted that clinical counseling supervision is a form of professional development.

Confidentiality

In accordance with [ASCA's Ethical Standards for School Counselors](#) and [Maine's Title 20-A §4008. Privileged communications](#), school counselors must respect the confidentiality of the students they work with. School counselors should provide all students and families with informed consent outlining the limitations of confidentiality including if a student has disclosed they are thinking about or intend to harm themselves or others, are being harmed by others, or if they give permission to share with another adult.

School Counselors are also bound by the Family Educational Rights and Privacy Act (FERPA) and can only disclose academic records to those parties identified by FERPA.

<https://www2.ed.gov/policy/gen/guid/fpco/ferpa/index.html>

ASCA School Counselor Professional Standards and Competencies

The ASCA Professional Standards and Competencies detail the mindsets and behaviors required of school counselors to meet the demands of their job.

<https://www.schoolcounselor.org/getmedia/a8d59c2c-51de-4ec3-a565-a3235f3b93c3/SC-Competencies.pdf>

Ethical Standards/Code

The ASCA Ethical Standards “specify the principles of ethical behavior necessary to maintain the highest standards of integrity, leadership and professionalism. They guide school counselors’ decision making and help standardize professional practice to protect both students and school counselors” (ASCA National Model, 2019).

<https://www.schoolcounselor.org/getmedia/f041cbd0-7004-47a5-ba01-3a5d657c6743/Ethical-Standards.pdf>

Ethical Decision Making Model

ASCA’s Ethical Decision Making Model:

1. “Define the problem emotionally and intellectually
2. Apply the ASCA Ethical Standards for School Counselors and the law
3. Consider the students’ chronological and developmental levels
4. Consider the setting, parental rights and minors’ rights
5. Apply the ethical principles of beneficence, autonomy, nonmaleficence, loyalty, and justice
6. Determine potential courses of action and their consequences
7. Assess the selected action
8. Consult
9. Implement the course of action” (ASCA National Model, 2019, p.28)

For more information on legal and ethical issues, visit ASCA [Legal & Ethical](#)

Advocacy

Presentations to faculty/staff, administration and the larger school community, including the school board, are effective ways to educate stakeholders about the role of the school counselor. These presentations are also an opportunity to educate others about the importance and benefits of a comprehensive school counseling program.

Examples of areas where school counselors may need to advocate for themselves and the profession are:

- The importance of having a certified school counselor at all levels in the district
- Recommended school counselor to student ratios
- Use of school counseling specific professional evaluation tools
- Appropriate roles and responsibilities for school counselors, as well as the scope of the job
- School counselor specific professional development time both during in service days and for off-site trainings which may mean occasional time away from the school building (ex. conferences and workshops)
- Supervision- either through a programmatic or peer supervision model

Manage

Information in this section describes organizational processes and tools needed to manage a comprehensive school counseling program effectively and efficiently and includes items that were previously in the “foundation” section of ASCA National Model Third Edition, 2012.

The ASCA National Model Manage section suggests that building excellent programs includes putting in place a beliefs, mission, and vision statement then outlining and collecting program data through the use

of various tools. Data will help in determining the needs of the school and district and in identifying priorities for the program. Data collected will also drive annual planning and curriculum delivery and help to close achievement and opportunity gaps. Calendars will help to organize the school counseling tasks and identify program priorities to coordinate school counseling activities and services that will reach all students.

Beliefs

Exploring shared beliefs allows counseling departments to develop the mission statement and implement the school counseling program. Each team member should contribute to the discussion, keeping in mind different points of view.

“Recommended Exercise on Developing Beliefs from the ASCA National Model Implementation Guide :

- What do we believe about the ability of all students to achieve?
- How do we address developmental needs of all students?
- What is the school counselor’s role as an advocate for every student?
- Who do we believe is involved in planning, managing, delivering and assessing program activities?
- How is data used to inform decision making?
- How do ethical standards guide the work of school counselors?” (ASCA National Model Implementation Guide: Manage and Assess, 2019)

Example 1

“As school counselors, we believe that a comprehensive counseling program is a necessity to the success of all students. The counseling program should be able to assist students in three areas: personal/social, education, and career. We believe that it is our job to work with students to enhance their achievement in order to become successful, productive citizens. We believe that all students are unique and all students face challenges. It is our job to work diligently with students to assist them in making decisions, finding paths, and a course of action to help them grow and develop. We believe that along with being an advocate for the students, we are also to be advocates for parents, the school, and the community. In order for us to be successful as school counselors, we understand that we must possess certain characteristics. The characteristics that we possess and feel are essential are: empathy, passion, and non-judgment. It is important that we treat every student with the utmost respect and understanding, regardless of sex, race, religion, sexual orientation, or academic achievement. Every child is precious and deserves a passionate and fair counselor.” (Bay Minette Middle School, Alabama)

Example 2

“The members of the Shaler Area School District School Counseling Department believe that an exemplary school counseling program should:

1. Be an integral part of the total school program.
2. Equip students with the skills necessary for them to achieve their career goals.
3. Utilize a team approach to eliminate barriers in school achievement.
4. Conduct activities that contribute to the development of a positive school climate.
5. Recognize students’ individual abilities and assist them in maximizing their potentials.

6. Help students develop a healthy self-concept and an acceptance of individual differences.
7. Link programs with opportunities for students outside of the school.
8. Include the participation of teachers because of their direct involvement with students on a daily basis.
9. Foster a positive relationship between home and school.
10. Strive for professional excellence through continued study and participation in professional organizations and workshops.” (Shaler Area School District, Pennsylvania)

Vision Statement

A discussion about vision builds off of the discussion of beliefs and becomes the picture of the ultimate outcome for students specifically related to academic, career and college readiness, social/emotional wellbeing or other related outcomes. The vision statement for the school counseling program aligns with the vision of the school and district (National School Boards Association, 2009).

Example 1

“The vision of the Evans City Elementary School Counseling Program is to provide a preventative, responsive and comprehensive program that cultivates academic, personal/social, and career connections for all students. Through advocacy, character development, leadership, and collaboration, self-awareness and academic achievement will evolve within a data-driven, multi-tiered rigorous educational environment and support system. Our vision is that this will ensure that all students understand and embrace their own value and have an intrinsic motivation to contribute to their community and a diverse world, as they become members of a global workforce.” (Evans City Elementary School)

Example 2

“All students at Weatherbee School are strong, committed life-long learners and community members built by rigorous academic, social and emotional practices. Students at Weatherbee School are compassionate and emotionally intelligent. They demonstrate empathy, resilience, inclusiveness and multicultural awareness that allow them to be world-class leaders. Weatherbee students are well prepared to participate in equitable college, career and civic opportunities and ultimately to become leaders on a global scale and make positive and impactful changes in our future world.” (Weatherbee School, Hampden)

Mission Statement

“One of the essential aspects of the foundation for a school counseling program is the mission statement. In the early development of the school counseling program, it is critical to determine a mission statement that gives overall direction and vision to the program. The statement should be specific, concise, and clear as to the intent of the school counseling program. A solid connection must be established with the educational mission statement.” (Connecticut Comprehensive School Counseling Program)

“The mission statement describes what the school counseling program does. It is a clear and concise statement that defines how your school counseling program reaches the long-range results described in the vision...”(ASCA National Model Implementation Guide, 2019, p. 16).

The mission statement should:

1. “Be written with students as the primary clients
2. Advocate for the equity, access and success of every student
3. Show linkages with the school, school district or state department of education mission statements
4. Indicate the long-range results desired for all students” (Maine Comprehensive School Counseling Program Model K-12, 2005)
5. Align with vision

Example 1

“Since education is a lifetime, dynamic process, the K-12 School Counseling Staff supports the Yarmouth School System in its commitment to ‘Empower All Students to Create Fulfilling Lives in a Changing World’. We strive to provide the necessary and fundamental means by which all students may work to attain their personal goals. In this commitment to excellence, it is our purpose to enhance skills, to encourage ethical behavior, and to create a learning environment that fosters intellectual, moral, physical, emotional and social growth. In doing so, all young people are provided with the means by which they can develop into open-minded, mature individuals, and responsible members of society. Thus, they are best equipped to live well-balanced, productive, and satisfying lives.” (Yarmouth School Department, Yarmouth)

Example 2

“The mission of the Weatherbee school counseling program is to provide a safe, positive and challenging learning environment of respect and caring for all students. Students reach their individual potential and become lifelong learners who are self reliant, creative and responsible citizens. The Weatherbee School counseling program partners with staff, families and community members and uses data to provide equitable access to resources and success for all students in the academic, personal and social/emotional domains throughout their lives. “ (Weatherbee School, Hampden)

Use of Data

The comprehensive school counseling program is based on student needs and data. School counseling activities will be implemented after a careful review of the school’s achievement, attendance and discipline data as well as the data compiled in the school’s or district’s needs assessment. It is critical to not only review the data but to disaggregate it, drilling down to examine trends in gender, race, ethnicity, socio-economic status (free/reduced lunch counts), course enrollment, special education, grade level, teacher assignment and other categories. Disaggregating data allows the counselor to examine equity and access and target specific populations to close the gaps in achievement or opportunity. (ASCA National Model, 2019)

School Data Summary

The school data summary/template allows schools to organize and disaggregate data to investigate achievement gaps or issues or equity. When examining data, it is important to look at immediate collections of data as well as trend data. ASCA recommends that comprehensive school counseling programs examine achievements, behavior (discipline), and attendance data, however, schools and districts should also look at data that are required to be submitted to the Maine DOE, as this data reflects state-level requirements that address student behavior and school performance. Immediate data collection

would reflect a single school year, such as pre/post tests, grades from quarter to quarter or increases in attendance, while trend data would be comparing year to year data such as graduation rates, college acceptance rates, attendance etc. Using the data gathered, counselors can work with administrators to set goals to improve any inequities or gaps. (ASCA National Model, 2019) For a School Data Profile template see: ([ASCA 4th Edition Templates](#)).

Program Results Data

The key to program results data is to show how students are different as a result of the school program (ASCA National Model, 2019). There are three types of results data:

- **Participation data:** “What did you do for whom?” An example of participation data would be stating that 56 parents attended college planning night, or that 375 students attended a bullying prevention program.
- **Mindset & Behavior Data:** This data helps measure if students are meeting standards focused on a student’s attitudes and beliefs about their own abilities as well as demonstrated skills. For example, a school counselor may deliver a pre/post test that seeks to find the percent of students who know how to write SMART goals.
- **Outcome data:** This data answers whether the program or intervention had a positive impact on “achievement, attendance, and/or discipline” (ASCA National Model, 2019). For example, average daily attendance increased from 88% to 91%, or the graduation rate improved from 78% to 87%, or that discipline referrals decreased by 24%.

Collecting data is important, but it is not the primary duty of a school counselor. Therefore, school counselors should connect with district or building technology specialists, data entry analysts, or attendance clerks to gather data or to compile data sets. Para-professionals can also help with these tasks. (ASCA National Model, 2019) Many of these data points (attendance, dropout rates, graduation rates, college admissions rates) are already available and tracked by your administration so make sure to ask the right people before starting. Counselors can also gather important data from various school surveys, such as the Maine Integrated Youth Health Survey (MIYHS), to identify needs.

Needs Assessment

School Counselors can use this tool to help identify trends and topics for immediate responsive service. “The results of the needs assessment may be used to establish priorities and to eliminate or create services as suggested by the needs analysis” (Connecticut Comprehensive School Counseling Program). From the results of the needs assessment and other data, counselors can develop priorities, goals, and areas for improvement. The results can also serve as data to support initiatives and programming that is going well and needs to be continued. Conducting a needs assessment should be an ongoing process at least every 3 to 5 years. (MCSCP Model K-12, 2005)

Ways to Gather Information Include:

- Surveys/Questionnaires – Parents, Staff, Students & Community
- Focus Groups
- Interviews
- Attending own/Community Meetings
- Advisor/Advisee Groups

- Through parent Organizations

Tips:

- Have a balanced questionnaire across domains of academic, career and social/emotional
- Remember to collect information anonymously
- Use a 4-point scale which allows no middle ground, some researchers prefer the 5 point scale
- Use age appropriate wording and design
- Follow administrative guidelines for data/collection survey
- Translate the survey into appropriate languages
- There are a number of examples of needs assessment available online to help you get started. The ASCA Scene “open library” has several examples and some of the blogs in our resource guide also feature step by step instructions for creating an online google survey to conduct your needs assessment. Remember, needs assessments may vary from school to school and district to district depending on the climate/culture of your community and school.

Cautions in Developing the Needs Assessment:

- Include only items/outcomes that you are willing and able to deliver
- Use a statistically acceptable means of sampling
- Solicit help (if needed) to analyze results and draw statistically valid conclusions from data
- Keep surveys simple to understand and complete in order to promote a high return rate
- Pilot the instrument with a sample to test it for comprehension (MCSCP Model K-12, 2005)

Annual Student Outcome (program) Goals

These goals help school counselors identify and measure the school counseling program’s impact on achievement, attendance, and discipline and define how the mission and vision will be accomplished. These goals should take into account the school data, any gaps in achievement or opportunity and should align with the school improvement plan. The SMART goal format developed by Doran (1981) is a tool for ‘developing specific, measurable, attainable results’ all within a specific timeframe. (ASCA National Model, 2012). When developing goals it may be helpful to develop an inventory of services and interventions already provided. Exploring and aligning with your district’s Comprehensive Needs Assessment may be important to your school. For template see: ([ASCA 4th Edition Templates](#)).

Example 1

“By Dec 19, 2021, (end of first semester) the cumulative number of absences in kindergarten will decrease by 50 percent from 36 during the first semester to 18 during the second semester.

Data source: First semester critical absence report (report generated by school data clerk at the request of counseling department). A review of the first-semester critical absence report disaggregated by grade level indicated kindergarten students had the most absences during the first semester.” (ASCA National Model, 2019).

Action Plans

Action plans state how instructional goals will be accomplished through a step by step process. In other words, how do you plan to achieve results through instruction once a goal has been identified? ASCA suggests multiple areas in which action plans should be utilized including classroom and group settings as well as closing the gap goal attainment. All action plans should include: “the participants selected for each activity based on school data, description of school counseling activities to be delivered, specific setting for each activity, selected ASCA Mindsets & Behaviors for each activity, timing of activities” (p. 46). (ASCA National Model, 2019). The closing the gap action plan also looks at specific goals to be addressed and the intended methods and outcomes for impacting achievement, attendance, and discipline data. ([ASCA 4th Edition Templates](#))

Lesson Planning

Planning lessons to address the ASCA Mindsets & Behaviors for Student Success is vital to a successful CSCP.

School counselors can plan group and classroom lessons with ASCA’s lesson plan template ([ASCA 4th Edition Templates](#)). School levels (Elementary, Middle or High School) will help determine the amount of time to be spent in classrooms. For example, elementary school counselors typically spend more time delivering classroom lessons to all students, and high school counselors spend less time in the classroom as developmentally more time is needed for appraisal and advising and counseling. Standards agreed upon by district, school, or specific school counseling department should be used when developing lessons. Collaboration with other staff in the building, the district, community partners and with outside providers is encouraged in order to deliver lessons and comprehensive programming (health teacher, advisory teachers, school nurse, Advocates for Children etc.).

Annual Administrative Conference

The annual administrative conference is a formal discussion between school counselors and the administrator in charge of the school counseling program. The entire school counseling staff, including the school counselor director and school counseling secretaries must agree to adhere to departmental decisions based on site needs and data analysis. School principals and district administrators must be involved in this important process and should attend an **annual administrative conference** with each school counselor. See template to guide conference:([ASCA 4th Edition Templates](#))

When implementing a comprehensive school counseling program, management decisions and agreements must be made regarding the organization and assignment of counselors (Johnson & Johnson, 2001). This should be accomplished in consultation and collaboration with school and district administration, as well as the school counselor director throughout program implementation. It is recommended that:

- The school counseling team members and administrator(s) review and discuss data-driven needs for the student population, school community and school/district as a whole based on data analysis.
- The school counseling team decides on a plan of action to meet student needs.
- The school counseling team and administrator(s) agree on how students, classroom lessons and services will be assigned to specific school counselors and other school and student support staff.
- The school counseling team produces and presents a draft of the annual administrative conference template on a yearly basis.

- The administrator(s) reviews the annual administrative conference template and arrives at consensus with the school counseling team.

Program implementation is based on the integration of all of the elements of the comprehensive school counseling program. Organizational plans should consider the following:

- How will students be assigned to school counselors to ensure every student has access to the program and acquires the pre-determined competencies? By grade level, alpha breakdown, standards domain, academy or pathway, see any counselor or a combination?
- Will school counselors choose to specialize in different areas? Who will provide counseling and crisis services while other school counselors are delivering the scheduled school comprehensive curriculum? Will the school/district implement a “school counselor of the day” program so there is always one school counselor available for crisis when others are delivering classroom lessons?
- What amount of time should be spent in delivering classroom lessons, providing appraisal and advisement, counseling and program management/school support?
- Who is responsible for implementation of the various services and specialty tasks?
- How will school counselors be compensated for work beyond the regular work day? What budget is available to purchase the necessary materials and supplies to implement the program?
- What professional development is needed to support the school counselor or team’s ability to provide a comprehensive school counseling program?
- How often should the school counseling department meet as a team, with administration, with school staff and with an advisory council?
- Who determines how and what professional learning for the school counseling team will be provided and organized? What role do school counseling assistants, registrars, clerks and volunteers play on the counseling team?

When school counselors and administrators meet and agree on program priorities, implementation strategies and the organization of the counseling department, the entire program runs more smoothly and is more likely to produce the desired results for students. (MCSCP Model K-12, 2005)

Use of Time

In “Developing and Managing Your School Guidance Program,” by Norm Gysbers and Patricia Henderson (2012), the authors encourage school counselors to work with their departments to protect their time so that 80 percent of their time is spent in direct services to and indirect services on behalf of students, staff, and families and the remainder is spent in program management. The percentages serve as a guide to school counselors and administrators when determining the time needed on programming for each of the four delivery system components.

As a first step to understanding the Use of Time, all school counselors should keep track of their time and document activities performed throughout their school days. This allows school counselors and administrators to determine the amount of time being spent in each of the delivery system components and in non-school-counseling activities. This is especially helpful when initially planning or revising a comprehensive school counseling program because it serves to answer the question of “What is” and then provides a forum for the discussion of “What should be?”

In programs with more than one school counselor per site, there is often more flexibility between and among school counselors in determining how much time individual school counselors may spend in the delivery of system components. Keeping in mind that the program percentages are only suggested; the individual time a certain school counselor spends in the delivery of systemic services may vary depending on talents and expertise. School counselors with expertise in group counseling may focus on delivering these services, while others may present more school guidance lessons. The time percentages are designed to be programmatic, not school counselor specific. School counselors are encouraged to allot times based on program priorities and needs. (MCSCP Model K-12, 2005)

A conclusion may also be drawn from the Use of Time information regarding how much time is currently being spent on school counseling activities versus non-school counseling activities. For example, in one school, 35 percent of the high school counselors' time was being spent on non-school-counseling activities, which included master schedule building, clerical tasks and the counting and managing of the standardized tests. Following a presentation to district administrators on the results of a time analysis, the administrators decided, and the governing board supported, elimination of the non school counseling activities and hired school counseling assistants to help school counselors. Eliminating non school counseling activities and providing more clerical help freed school counselors to provide more direct services to students. Again, ASCA recommends school counselors spend a minimum of 80% of their time in direct and indirect service to students. (MCSCP Model K-12, 2005)

Use of Time Assessment

The ASCA National Model recommends that school counselors complete the Use of Time Assessment twice during the year during a typical school counseling week. This will help school counselors determine how they are using their time and can help determine how much time is being spent on school counseling versus non-school counseling activities. School counselors should look over their use of time assessment to determine where their time is being spent, and then use the use of time assessment in conversation with school administrators when determining school counseling needs. According to the ASCA National Model (2019), time spent in indirect and direct service to students looks different for different grade levels and different school communities. Time spent on program delivery tasks may be dictated by needs in a regional area as well as the demographic of students. For example, While the ASCA National Model (2019) suggests that elementary school counselors spend more time on curriculum and counseling services, a high-needs school in a rural community with only one or part-time school counselor may need to allocate less time on those delivery components and more time on referrals, consultation, and collaboration to combat a specific problem in that community, such as poverty, opioid use, or regular attendance. The school counselor in this situation may need to advocate for additional school counselors in their district so that they can more evenly distribute their time into the other components of the comprehensive school counseling program.

Again, it is recommended that 80% of time is spent on direct and indirect services to students (individual instruction, individual appraisal, advisement, and counseling) and **indirect services on behalf of students** (consultation, collaboration and referrals). (Gysbers & Henderson, 2012) Access template here: [ASCANational Model 4th ed templates](#)

Appropriate vs Inappropriate School Counseling Activities

American School Counselor Association 2019

Calendars

“School counselors develop and publish calendars of school counseling events to inform students, parents, teachers and administrators of what, when, and where school counseling activities will be held” (ASCA National Model, 2019, p. 68). The calendar establishes a schedule for the comprehensive school counseling program activities, and helps to validate the importance of the CSCP by increasing the visibility of the program to students, parents/guardians, teachers and administrators.

Calendars can:

- Identify grade levels, dates and activities
- Be published and distributed to appropriate persons: students, staff, parents or guardians and community
- Be posted on a weekly or monthly basis
- Be compared to locally established goals for time spent in the delivery of system components
- Be utilized to allocate time for data analysis and program evaluation
- Be used when designing and determining system priorities
- Be shared with the principal as an indicator of leadership, advocacy and foresight in the school counselor's professional approach (MCSCP Model K-12, 2005)

Annual Calendar

“The yearly calendar is a way for school counselors to identify the school counseling program priorities and their commitment to them. Ideally, the calendar is located in several prominent places such as the department bulletin board, school or student bulletin boards, classroom bulletin boards, administrative offices, career center, student store and other sites used to communicate school events. It may also be submitted to the local newspaper, the student newspaper and the school counseling department's website to increase the program's visibility. The calendar might also include relevant school activities for families, such as back to school night, open house, parents or guardian-teacher meetings, standardized tests dates, parents or guardian, student and teacher conferences, planned school counseling classroom lessons, career or college nights, evening meetings or other opportunities provided through the school and the community, as well as the student support program” (MCSCP Model K-12, 2005).

School counseling offices are encouraged to find effective ways to publish calendar events, such as on the school's website or social media, according to local school board social media use policy. A full copy of the annual calendar template can be found online at ([ASCA 4th Edition Templates](#))

Monthly Calendar

The monthly calendar is a planning tool that may be used to highlight the specific activities and events for each month throughout the school year and into the summer. Although it is not suggested by the ASCA National Model, it can be distributed to teachers, parents and students to inform them about upcoming events or classroom lessons. (MCSCP Model K-12, 2005)

The Weekly Calendar

The weekly calendar is not a master schedule but a fluid road map that is somewhat flexible due to crisis or immediate student needs. In addition to classroom lessons, group counseling and individual counseling, school counselors should build data analysis, collaboration, committee work, and advocacy into the schedule to allow for some flexibility. (MCSCP Model, K-12, 2005)

Advisory Council

An advisory council is a representative group of persons appointed to both advise and review the school counseling program within a school building or district. The advisory council reviews the program goals and results and participates in making recommendations about the school counseling department, principal and superintendent (Johnson & Johnson, 2001). Ideally, advisory council membership reflects

the community's diversity. It should include representative stakeholders of the school counseling program: students, parents or guardians, teachers, counselors, administrators, school board members, business and community members. The council should meet twice a year at a minimum and publishes an agenda and minutes. School counselors, after analyzing data related to the plan's overall effectiveness, should make decisions regarding changes in program content and delivery. The advisory council members, using their background and expertise, provide support, input and recommendations for program development and improvement throughout the process. The advisory council, therefore, can be an effective tool to help build an excellent comprehensive school counseling program.

Setting up an Advisory Council

When creating an advisory council, the school counselor must consider two things: stakeholder representation and group size. The advisory council truly represents the school's and/or district's stakeholders. "The broader the representation on the advisory council, the more the group's work will accurately reflect the community's values, concerns, and interests. Although broad representation is crucial, the council's size also is an issue. It is important to create an environment that is conducive to informed, constructive discussion. A council with too many members may be ineffective. Generally, a good rule of thumb is to establish a council with a minimum of eight members and a maximum of twenty members" (ASCA National Model, 2019). The first step in forming a viable council is selecting good candidates for membership. The council must be able to function as a communications link between the school counseling program and the various groups to be served: students, parents or guardians, educators, business and the community (MCSCP Model, 2005). One purpose of the council is to engage in public relations for the school counseling program and to advocate for funds and resources to support the program (Johnson & Johnson, 2001).

Deliver

School counselors *provide data driven services to, and on behalf of, ALL students* through direct and indirect methods. Program delivery looks different at each developmental level ([The Essential Role of Elementary School Counselors](#), [The Essential Role of Middle School Counselors](#), [The Essential Role of High School Counselors](#)). According to the ASCA National Model, school counselors should be spending 80% of their time on direct and indirect student services. The delivery of a comprehensive school counseling program should directly support the program's mission and vision and should adhere to the beliefs outlined in the program. Effective as of September 19, 2019, Maine has defined direct and indirect services, and the Maine DOE will be adopting rules that are guidelines for identifying the duties of school

counselors and school social workers. See [*An Act To Increase the Amount of Time School Counselors and Social Workers Spend Providing Students Direct and Indirect Counseling*](#)

Direct Student Services

Direct services are in-person interactions between a school counselor and students. Activities include providing instruction in order to deliver a school counseling core curriculum, providing appraisal and advisement, and providing short-term counseling.

Instruction

School counselors teach the school counseling curriculum through the lens of selected student standards from the ASCA Mindsets & Behaviors in order to help students meet standards chosen by the school or district. The school counseling curriculum is designed to help students gain proficiency in standards from the three domains of school counseling (social/emotional learning, college and career readiness, and academic success). The school counseling curriculum is delivered as part of the school's overall curriculum, and is systematically delivered by school counselors in collaboration with other professional educators. It is important for a school's or district's entire staff to understand the importance of the school counseling curriculum within a CSCP in order for there to be successful delivery. The explanation of the curriculum should accompany clear evidence of how it helps the school meet learning outcomes and how it will improve outcomes of achievement, attendance, and discipline, as this will encourage input or collaboration from the staff. An advisory council for developing a school counseling curriculum may be formed and facilitated by the school counselor in order to gather suggestions relevant to the content that would meet the current needs of families and the community at large.

- ***Classroom Instruction & Activity:*** Through direct instruction, team teaching or assisting teachers with instruction, school counselors provide curriculum specific content to students. School counselors design instructional units to include: a lesson, student activity, and assessment of learning. Units can be delivered through push-in classroom instruction* by school counselors. Short lessons or the administration of assessments can be packaged for delivery by homeroom or advisory teachers. Objectives for each instructional lesson should align with the [*ASCA Mindsets and Behaviors for Student Success*](#) and/or other related standards as determined by the school counseling team, in order to ensure the lesson is providing all students with the knowledge, attitudes and skills appropriate for their developmental level.
- ***Small Group Activities (school-wide programs):*** School counselors conduct planned activities outside the classroom - e.g., career fair, leadership workshops, college fairs, Kindness Week

*Tips for push-in classroom instruction:

- Speak to teachers ahead of giving a lesson and reinforce classroom norms. Some examples of questions to ask classroom teachers include: when do you allow students to go to the bathroom? Do students need passes to leave the room? Should students raise their hand if they have a question?
- Have a visual posted so students know the learning target
- Give students an overview of what you'll do in your lesson to set expectations.

- ❑ Speak to teachers ahead of time so they remind students if technology or other materials are needed
- ❑ Look at the roster of students ahead of time and prepare to differentiate instruction (for example, does a student need to take a paper and pencil assessment or need a quiet space).
- ❑ Frameworks like Universal Design for Learning may be helpful when preparing for your lesson. See appendix for example on getting started with Universal Design for Learning.
- ❑ Decide how you will assess whether or not students met standards (example: having students name concepts, rubrics, pre-post test.) Assessments should assess all three of the following: knowledge, attitude, skills
- ❑ Use assessments to collect data in order to evaluate the success of the lesson and inform future instruction.
- ❑ When possible, include teachers in your lesson.
- ❑ School counselors may need to deliver content typically delivered in a classroom or small group to an individual with specific learning needs or who may have been absent, as a pull-out service.

Calculating % Change: When reporting results, school counselors need to compare data from before an intervention to after the intervention. Whether this is through pre/post test, rubrics or outcomes data a formula is used to calculate the percentage (%) change:

$$\frac{\text{Post Intervention \#} - \text{Pre Intervention \#}}{\text{Pre Intervention \#}} \times 100 = \% \text{ Change}$$

Adapted from MA 2.0 Model

- **Individual Instruction:** School counselors coordinate ongoing systemic activities designed to assist students and families in establishing and monitoring an individualized plan for the student's post PreK-12 education in college, career and global citizenship. Individualized plans are mostly specific to the student's interests, skills, and abilities but it is important to note that some Maine families come from collectivist cultures and expect that the family or cultural community has an equal voice to the student in future planning.

Appraisal and Advisement

School counselors provide appraisal and advisement in order to help students better understand themselves and set goals.

- **Appraisal:** school counselors use assessments to help students recognize their skills, abilities, interests, preferences, aptitude and achievement. School counselors should understand how to

read the scores of academic assessments such as: MEA, ACCESS, SAT, ACT. School counselors use the results of assessments to help students gain personal insight and develop immediate and long range plans.

- **Advisement:** school counselors help students and families make decisions for future plans based on academic, career and social/emotional data. This data may be the result of personality self-assessments, and /or career inventories. Individual advisement by the school counselor can be supplemented by grouping students based on interest and by involving other educational professionals in areas like homeroom or advisory. See resource guide on DOE Website for examples of how school counselors effectively collaborate with administrators and classroom teachers around the use of homeroom, advisory, or other common time in the school's schedule.

Counseling

Counseling is the professional delivery of support based on counseling theories and skills. Counseling is aimed at removing barriers to student success and promoting academic, college and career, and social/emotional development. Counseling can be proactive or responsive and consists of short-term activities designed to meet students' immediate needs and concerns in coping with a specific problem. Counseling may include preventative programming, counseling in individual or small-group settings, or crisis response. Common problems that school counselors report responding to in Maine vary by setting (rural or urban). Common problems include but are not limited to:

Social/Emotional:

- Opioid addiction or overdose (of family member)
- Suicidal ideation
- Non-suicidal self-injury
- Attendance issues
- Fear of deportation
- Anxiety/Depression
- Bereavement
- Pregnancy
- Gang involvement & human trafficking
- Substance use and abuse
- Bullying and harassment
- Racism and discrimination based on perceived and real identity
- Relationships with peers
- Family relationships
- Juuling, other substance use
- Dating relationships
- Cyber safety
- Social skills
- Homelessness
- Trauma, ACES
- Deployed Parents

Academic:

- Lack of motivation or interest in learning
- Test anxiety
- Fit with teacher
- Failing classes
- Study skills
- Organization skills
- Time management
- Coping strategies

College/Career

- Overwhelming pressure from parents/guardians
- College and career decision making
- Barriers to Financial aid
- Scholarship Assistance
- Lack of familial support

Individual Counseling-School counselors form a trusting relationship with students and offer time-effective, solution-focused sessions with students to help students overcome issues impeding academic achievement and address immediate safety concerns. School counselors are knowledgeable about DSM diagnostic criteria but do not give diagnoses. School counselors adhere to their scope of practice and ethical responsibilities by respecting the privacy and identity of the student when possible, referring students who may need long-term counseling, and reporting, to the appropriate agency when it is suspected that a person's welfare is in jeopardy.

Small Group Counseling-School counselors may run small groups focused on solving specific problems or supporting the group around a certain topic. In small groups, students "...can share ideas, give and receive feedback, increase their awareness, gain new knowledge, practice skills and think about their goals and actions" (Bardhoshi, 2016 p, 27). Like individual counseling, school counselors should adhere to the scope of their practice and provide support to groups on mental health topics (psychoeducational groups), but do not provide treatment for mental health or substance use disorders in groups. See: [The School Counselor and Group Counseling](#)

Check-ins: School counselors work with students or other individuals to update, obtain, or distribute information.

THIS HAS BEEN MOVED TO THE INDIRECT STUDENT SERVICE SECTION IN THEN 4TH Ed (it's all consultation and collaboration) Crisis Response-School counselors support and assist students as they navigate critical and emergency situations. School counselors work with a team including administrators, nurses, community crisis responder, school resource officer, and social workers or school based clinicians. See ASCA position statements: [Identification, Prevention and Intervention of Behaviors That Are Harmful and Place Students At Risk and Suicide Prevention/Awareness.](#)

School counselors should be prepared to conduct preventive services to prepare themselves, students, and other educators for crisis response. Several Maine laws mandate the implementation of components of prevention. LD 609 requires that all educators in Maine are trained in suicide prevention and awareness and that schools have at least two gatekeepers, these trainings need to be updated every five years (See Appendix).

School counselors, along with other school specific behavioral health professionals, play a role in training and retraining staff in mental illness and suicide awareness and prevention. The state of Maine is working on a law that will require all Maine schools to educate students on mental illness. Especially in rural areas and in schools that do not have school based social workers, school counselors may need to be educated in delivering a comprehensive suicide prevention program and may work with health teachers or other professionals to deliver this curriculum.

School counselors play a key role in developing and following a school's suicide protocol. Maine's branch of the National Alliance of Mental Illness (NAMI) provides periodic trainings where school counselors can receive and renew their own gatekeeper training and where they can work on their school's comprehensive suicide prevention program.

<https://www.namimaine.org/page/SupportforSchools>. School counselors can serve as resource coordinators for providing information on mental health issues including making connections with local agencies which specialize in providing services for circumstances such as mental health crisis, domestic violence, etc.

Maine revised statute Title 22: §4011-A. Reporting of suspected abuse or neglect (<http://www.mainelegislature.org/legis/statutes/22/title22sec4011-A.html>) requires that any adult person who is interacting with a minor is required to report suspected child abuse or neglect to the Maine Office of Child and Family Services (OCFS). All school counselors are mandated reporters.

School Counselors are not required to make calls to DHHS on behalf of other educational professionals but may make themselves available to assist others who need to make these calls. To revisit your responsibility in identifying and reporting suspected cases of child abuse or neglect visit:

<https://www.maine.gov/dhhs/ocfs/mandated-reporters.shtml>. In addition, Maine's Public Law 20-A MRS §254, sub-§18, "requires that all school administrative units in Maine with public pre-K through grade 5 programs have a written policy for child sexual abuse prevention education and response." For more information see: <https://www.childrensafetypartnership.org/>.

School counselors should be prepared to conduct follow up and postvention services with students, family, and staff after a crisis has occurred. School counselors should look to their school's suicide and crisis protocol for guidance.

Indirect Student Services

Indirect services are *provided on behalf* of students as a result of the school counselors' interactions with others including referrals for additional assistance, consultation and collaboration with parents, teachers, administrators, students' IEP/504 teams, and community organizations. This is a means to support student achievement and promote equity and access for all students. Indirect student services are delivered through such strategies as:

- **Consultation:** School counselors share strategies that support student achievement with other education professionals in their building and district. School counselors offer their knowledge on counseling techniques, behavior and classroom management, etc., School counselors use consultation to receive information regarding student needs.
- **Collaboration:** School counselors work with key stakeholders to solve specific problems. They work with others to advocate for students through teaming and partnering (working with systems stakeholders like families), school/district committees (advocating for school wide supports and school counseling programming), parent workshops (organized dissemination of information), community partnerships (working with organizations to provide services like internships), and crisis response (serving as a key member of the crisis response team).
- **Referrals:** School counselors should stay informed about school and community resources and form relationships with community stakeholders, such as food pantries, counseling services, and LGBTQ+ support, in order to make appropriate referrals for students and families. Many students and families in rural Maine do not have easy access to appropriate mental health or support services, therefore, school counselors should advocate in the best interest of the student, in partnership with parents/guardians, to gain access to appropriate levels of support and services. School counselors should be aware of the most appropriate and updated resources (websites, publications, etc.) to share with students and families who need more information on a topic.
- **Conference/Staffing:** School counselors continuously interact with other adults in students' lives in order to determine the best supports for a student. School counselors should advocate for a team approach to student planning, bringing together appropriate stakeholders such as parents and other educators. While school counselors are involved in school and district committee work and processes such as Multi-Tier Systems of Support (MTSS), Response to Intervention (RTI), Student Support Team (SST), English Language Learning (ELL), Special Education (SPED), and Attendance, it is important to note that school counseling time should not be used to coordinate 504 meetings. School counseling services are available to ALL students and therefore should not be written into IEPs as special services. (See ASCA's position on this issue [The School Counselor and Students with Disabilities](#))

It is recommended that 80 % or more of the school counselors' time be spent in direct and indirect student services. The other 20% of school counselor time is spent on program planning and school support including data analysis, program management, professional development, and fair-share school responsibilities.

Assess

Best practice suggests that school counselors conduct a variety of assessments to collect data. Analysis of data assists school counselors in monitoring student success, guiding programming changes, and examining

growth in counselor performance over time. Ultimately, the results of analyzing data should provide stakeholders with evidence of the impact and effectiveness of the school counseling program over time. The results of the analysis should reflect the efficacy of the counseling program, highlighting systemic successes and areas of future work or concern. All data analysis should help the school counselor set goals aimed at closing achievement and opportunity gaps.

Several types of data can be examined by the school counselor but it is important to note that it should neither be the responsibility of the school counselor to collect *all* of the data listed here, nor their responsibility to implement programming based on some of the data elements listed. For example, attendance, PBIS, discipline, and office referral data may be helpful trends for school counselors to be aware of but ultimately it is the responsibility of administrators to implement policies and procedures to address student behavior. With the caveat that there may be other data elements that should be collected or examined primarily by other professionals in the building, the following examples of student data elements *can* be examined by school counselors and some elements *may* be used to determine the comprehensive school counseling program's activities.

Example 1, in examining the number of students enrolled in AP or IB classes along with student demographics, it may be discovered that a vast majority of students accessing these classes are white or have high SES. School counselors may then work with administration, teachers, and other professionals in researching a plan to make these classes more available to students of color or students with lower SES.

Example 2, when looking over office referral data for the middle school, it's discovered that a majority of the students sent to the office are boys of color. As suggested by ASCA's position statement on the role of the school counselor and discipline [The School Counselor and Discipline](#) you may then start a small group with several boys who have been referred to the office more than once to work with them on developing prosocial behaviors. In collaboration with school social workers and teachers, you may also put together positive behavior plans for individual students, finally, you might work to advocate for equitable and fair restorative and disciplinary practices.

Data that *can* be examined by school counselors and *may* be used to determine relevant CSCP activities:

Student demographics

- Enrollment data
- Age
- Gender identity
- Ethnicity
- Grade levels
- Languages
- Race
- Number of students receiving free and reduced lunch
- Special Education

Academic achievement

- Standardized test scores
- Grade-point averages
- Class rank

- Individual course grades
- Standardized test scores (MEAs, PSAT, SAT, Access)
- Enrollment in Honors, Advanced Placement (AP), International Baccalaureate (IB)
- Enrollment in early college & dual enrollment classes

Social/Emotional (Behavioral)

- Attendance
- Dropout rates
- Graduation rates
- Office referrals
- Detentions/suspensions/expulsions
- PBIS data
- Substance use and abuse (taken from behavior data)
- Number of threat assessments completed/other safety data

College & Career development

- Students enrolled in work experience
- Job shadowing
- Post-secondary enrollment
- Enrollment and success in CTE
- Post-secondary retention
- College application rates
- College persistence rates

Community Involvement

- Parent or guardian attendance at evening activities
- Parent workshops and conferences
- Parent communications with school
- College rep visits

School-wide

- Climate survey results
- ESEA Report Cards
- Qualitative reports from advisory council members
- Staff reports
- Surveys on the counseling program

It is important that when educators look at data, that they recognize the limitations of the data collection method, as well as the data set presented. School counselors might ask limitation questions such as: was the survey anonymous so that students felt like they could answer honestly? Is the data examined showing us a correlation or does it signify causation, though ASCA (2019) cautions: “Causality is not the goal of tracking outcome data” (p.37). Is this data collection method valid and reliable? Did the survey ask for both quantitative and qualitative feedback? What types of data are missing to get a full picture of an issue? What qualitative or quantitative data points would we need to help begin to explain these results?

For example, when working to get a picture of how a high school performs in helping students with the college process, school counselors might survey students in their senior year. The survey could count the number of students applying to college or the number of students who attended a college specific meeting

in their junior year (quantitative data). The survey might also ask students their opinions on what they felt was the most helpful or what they wish they had received more help with (qualitative data).

Program Assessment

School counselors should continuously assess their comprehensive school counseling program to identify how their work is positively impacting student success and to identify areas of improvement.

School Counseling Program Assessment

School counselors should conduct a yearly program assessment in the spring, in order to identify areas for improvement and success and set short and long-range program goals. The program assessment allows the school counselor to take a systemic look at their comprehensive school counseling program in order to indicate whether or not they have put in place the criterion that follows the ASCA National Model. See [ASCA 4th Edition Templates](#)

School Counseling Process Assessment

School counselors can perform periodic assessments of specific processes and interventions. Analyzing processes and interventions allows the school counselor a chance to make sure their activities are aligned with the vision, mission, and program goals. It allows the school counselor to assess data asking such questions as: *does this intervention help close the achievement gap?* or *is this intervention accessible to all students?*

Process analysis can be done directly after an intervention or programming component is offered. For example, school counselors at a middle school level might want to assess how many and which students were served by their career fair (participation data), whether or not students attained knowledge about a specific career choice or their own interests (mindset & behavior data), and whether or not student's academic achievement, behavioral (discipline), or attendance data changed as a result of the career fair (outcome data). Other processes school counselors may want to assess include things like, how PSAT scores are disseminated, student transition from elementary school to middle school, best use of vertical counseling teams, kindness week programming, etc. Questions to ask when assessing a school counseling process might be: What went smoothly during that process, what resources were needed but not available during that process, who else could have helped make that day a success?

Annual Results Reports

Results reports help answer the question, "How are students different as a result of the program?" (ASCA National Model, 2019) and serve as a tool for ensuring the CSCP was carried out as planned, ensuring every student was served and that developmentally appropriate materials were used. Results reports also help the school counselor document and analyze the program's participation, mindset & behavior, and outcome data. Ultimately, results reports help school counselors determine their program's immediate, intermediate and long-range impact and effectiveness. Results reports can help with school counselor advocacy when systemic change needs to be made.

Results reports also allow school counselors to target interventions based on demographic information. As previously mentioned in the manage section, there are three types of data reviewed: participation, Mindsets & Behaviors, and outcome data. Results reports align with action plans.

Classroom and Group Mindset & Behavior Results Report Analysis

Analyzing classroom lesson results should help school counselors determine if their classroom units or lessons were effective in making a difference for students. ASCA's suggested questions include: "were the lessons delivered at the best time and in the most effective way?" (ASCA National Model, 2019, p. 90) Additional questions might include: How many students were served? Were lessons accessible to all students? Did all the planned lessons run and did the content match the standard chosen. Most importantly, did student's learning increase as a result of the lesson?

Small groups report analysis can help school counselors determine if processes used to set up and recruit the group, set goals, and offer intervention was impactful. When analyzing the success of a small group, school counselors should look at the collection of the sessions and not just one session. ASCA recommends asking some of the following questions: "how was data used to identify small group topics, how did the group content/materials align with evidence-based, action research or best practice? (ASCA National Model 2019, p. 90). Additionally, school counselors might ask themselves if the group set appropriate goals and if it met those goals through activity as well as if students felt their behavior or attitudes changed as a result of the activities.

Closing-the-Gap Action Plan Results Report Analysis

School counselors know that not all students come to school with equitable access to academic and social/emotional resources. Analyzing disaggregated school data helps to uncover areas of concern in terms of access and equity to specific programming.

For example, which demographic of students takes AP classes or has access to private tutoring for the SATs. Once the problem areas are identified, it is important to thoughtfully consider the factors that are creating barriers in identified areas. School counselors can then strategically design programs or activities to help lessen the barriers and begin to close the achievement and opportunity gaps for the groups of students identified as not having access to education resources, services, or programming.

After the analysis of disaggregated data, educators design innovative interventions and implement programming and curriculum components specifically geared toward ensuring those previously underserved students receive equitable and appropriate school counseling services. The results of these interventions can be documented with participation data. "These types of program results move school counseling from the periphery of the school's mission to a position where the educational community views it as critical to student success" (citation unknown).

The following list of questions was adapted from ASCA National Model (2019) and can be used by school counselors when analyzing their closing the gap action plan results:

- How were best practices (evidence-based) chosen?
- How did the chosen strategies impact achievement, attendance, and/or discipline data?

- What are the areas where data indicates a specific group of students has access to services, resources, or programming more than another group
- What did the participation data indicate? (Example: how many students had access to which interventions, how many students of which demographic areas are disciplined the most)
- What was the perception of participants? (Example: did one group of students feel they understood the material more than another during pre & post tests)
- How did the activities align with chosen standards?
- What did the outcome data indicate? (Example: did one group of students increase their attendance as a result of an intervention over another group).

Careful consideration should be made when creating closing the gap interventions to ensure school counselors are effectively leveraging their community connections. An advisory council, administrators, and identity specific social service, support, and education organizations should be included as much as possible in the programming innovation stage.

Data Analysis Over Time

Analyzing data over time can inform changes to the comprehensive school counseling program. Analyzing the school data profile and the school counselor's use of time assessment can help the school counselor recognize areas of where to focus intervention and how to rearrange their time in order to meet their goals.

Reporting Program Results

Ultimately, school counselors need to be able to share how their comprehensive school counseling program has made a difference for students. Sharing the impact of the CSCP with stakeholders is important for the advocacy of both the overall program as well as the role of the school counselor. School counselors can share results in a variety of ways. The ASCA National Model (2019) recommends compiling data and using results report templates and graphics and sharing results at staff meetings, through websites and newsletters, through letters home, directly to the district or central office, to advisory council members, and at parent nights.

School Counselor Assessment and Appraisal

School counselors should perform frequent evaluations of their own performance and should receive periodic performance evaluations from a qualified administrator and/or mentor.

ASCA School Counselor Professional Standards & Competencies Assessment

School counselor standards and competencies were developed by ASCA and outline the skills school counselors need to deliver a data-driven CSCP adherent to the goals of serving students under three domains (social/emotional development, academic success, and college and career readiness). School counselors can use the ASCA Professional Standards and Competencies assessment to evaluate the relevance and currency of their skills. They can also use the assessment to set their professional development goals for evaluation and to justify salaries. School counselors can conduct an assessment yearly.

School Counselor Performance Appraisal

Under Maine's Educator Effective law, the evaluation of teachers and administrators are required using an approved evaluation tool. In many districts, school counselors are evaluated using the same tool as teachers. Teacher based evaluation systems often assess school counselors solely on their performance in facilitating a class-wide school counseling lesson, disregarding the majority of the school counselor's duties and shortchanging the school counselor when it comes to real and valuable feedback about overall performance including areas for growth and successes.

ASCA recommends that school counselors are evaluated based on the role and scope of their specific position. ASCA's School Counselor Performance Appraisal offers a tool for school administrators to use to evaluate school counselor behaviors. A school counselor's performance should be evaluated by self-assessment, administrator assessment/observation, and assessment of attainment to meeting professional development or professional growth goals.

School counselors should advocate for the use of school counselor specific evaluation tools. The timeline for evaluation should be aligned with the school counselor's professional growth track and contract. School counselors should be conducting their own performance appraisals yearly regardless of contract.

For an example of a district-wide comprehensive school counseling program, please see the RSU 075 Sample program created by Dr. Deborah Drew's 2019 EDU 701 students at Maine DOE resources

For an example of a Recognized ASCA Model Program (RAMP), please read the *Weatherbee School Counseling Program* at Maine DOE resources [2018-2019 Weatherbee School Counseling Program.pdf](#)

Resources

In addition to the resources listed here, it is recommended that all school counselors maintain a local list of resources in their school community and surrounding area for referrals and family assistance. This list might include resources such as local therapists and clinical counselors, case management, mental health services, food pantries, shelters, clothing closets, enrichment opportunities such as big brothers/big sisters and alternative funding sources.

GLSEN's Supporting Safe and Healthy Schools for Lesbian, Gay, Bisexual, Transgender, and Queer Students: A National Survey of School Counselors, Social Workers, and Psychologists - This guide is the latest example of GLSEN's evidence-driven approach to understanding the dimensions and impact of LGBTQ issues in K-12 schools, and identifying the most promising avenues for an effective response.

https://www.glsen.org/sites/default/files/Supporting%20Safe%20and%20Healthy%20Schools%20-%20A%20Report%20on%20Mental%20Health%20Professionals%20%26%20LGBTQ%20Youth_0.pdf

GLSEN's Guide for Trans and Gender Nonconforming Students - This guide outlines the rights students have in their schools. https://www.glsen.org/sites/default/files/Trans%20Student%20KYR_0.pdf

The Gender Cool Project - The GenderCool Project is a national storytelling campaign spotlighting remarkable stories of transgender young people. <https://gendercool.org>

Trans Youth Equality Foundation - The Trans Youth Equality Foundation provides education, advocacy, and support for children and youth who are transgender and gender expansive and their families. <http://www.transyouthequality.org>

Safe Spaces: Any staff member in the district can order their own Safe Space kit. The guide provides concrete strategies that will help you support LGBTQ students, educate about anti-LGBTQ bias, and advocate for changes in your school. The kit not only guides you through making an assessment of your school's climate, policies, and practices but it also outlines strategies that you may use to advocate for change, including posting a Safe Space sticker or Safe Space poster in your classroom or office. <https://www.glsen.org/safespace>

Teaching Tolerance's Best Practices for Serving LGBTQ Students guide - Written to help school leaders ensure that all students feel safe, seen and capable of success; to ensure that the curriculum is as complete and representative as possible; to ensure that the school climate fosters open and respectful dialogue among all students and staff; and to prepare youth to engage and thrive within our diverse democracy. <https://www.tolerance.org/magazine/publications/best-practices-for-serving-lgbtq-students>

The Human Rights Campaign's Schools in Transition guide - Written for administrators, Gender Spectrum - Gender Spectrum's mission is to create a gender-inclusive world for all children and youth. To accomplish this, they help families, organizations, and institutions increase understanding of gender and consider the implications that evolving views have for each of us. <https://www.genderspectrum.org>
